

SANitize box

OZONE SANITIZATION SYSTEM

Sanitizes and sterilizes by eliminating **VIRUSES, BACTERIA, MOLDS, FUNGI** from masks, glasses, keys, smartphones, tablets, earphones, wallets, coins and any other commonly used personal item

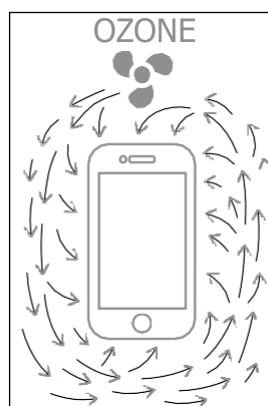

OPERATION

The sanitization process at the base of SANItize box is obtained by generating ozone, a highly oxidizing gas capable of making inert organic and inorganic compounds. For this reason, since its discovery it has been used as a bactericidal, fungicidal and inactivating agent for viruses.

SANItize box is easy to use, a single button allows the automatic start of the sanitization cycle lasting 20 minutes.

ORGANISM	EXPOSURE
Bacteria	1 cycle
Viruses	1 cycle
Fungi	1 cycle
Molds	3 cycles

Unlike other technologies, the action of ozone spreads evenly inside the sanitizing chamber in order to obtain a homogeneous treatment on the entire surface to be treated even in the points that are not normally accessible.

FEATURES

- Only one button to start and stop
- Large sanitizing area:
220x160mm / 8.6 x 6.3 inch
- Status LED
- 12V power supply
